

Altran AG Switzerland: Your consulting partner for medical technologies and innovation

Altran is a worldwide leading service provider for different industries and technology fields including medical engineering. We are also leaders in innovation and technology management and a reliable partner for the healthcare, pharmaceutical and medical device industry in all kinds of R&D and industrialization projects. International highly-skilled experts bring creative ideas to life; optimize concepts, and help you to develop visionary products and services.

Future business solutions

Time pressure, cost pressure, sales/purchase pressure, innovation pressure, project pressure ... In today's competitive and fast-moving markets companies are faced with lots of different challenges. Based on long-term project experience, specialized skills, and their dedication, Altran experts know exactly the factors that challenge development and production of medical products or services. As a leading provider of engineering, technology, and innovation consulting, Altran addresses the problems at their roots and delivers optimal solutions needed for your success.

Living innovation

Altran has developed and group-wise launched a very successful systematic innovation methodology called Altran NEO – a well defined framework to tackle innovation and problem solving challenges in a very efficient way. Altran NEO combines the best innovation techniques with a solid system & project management approach. It builds on 6 key elements: reducing psychological inertia, solution space / directions, creative thinking, subject knowledge, climate and emotion setting – elements that are all integrated through a generic and modular process that is individually adapted to specific client needs. World-leading companies in medical device and pharma industry sectors have already profited

from Altran training and collaboration in various problem-solving projects.
